**Voting Age Population figures are furnished by the U.S. Census for 1970 and each year thereafter. For earlier years, the decennial figures from the U.S. Census are used for 1900, 1910, etc., and estimates are then figured for each year of the decade by averaging the total increase over the ten years. For years before 1900, the rate of increase of the general population was used.*
